

*LOMA LINDA UNIVERSITY*

## **Come Work at Loma Linda University in the Department of **CLINICAL RADIOLOGY****

The department of clinical radiology at Loma Linda University is expanding its clinical and basic science research section. The goal of the radiology department is to create a research team interested in fulfilling the mission of Loma Linda University by contributing to the rapidly growing fields of molecular radiology and molecular medicine. The department is interested in attracting individuals at three primary levels:

1. **PhD Student** – The department will choose and support one student towards the completion of a PhD degree in MR imaging. This support will include tuition and other benefits. The primary goal is to train someone for a research position working in the clinical department of radiology.
2. **Summer Internships** – The department will choose from students interested in a summer internship in research in radiology, molecular biology, or imaging physics. There will be a limited number of paid internships and a few more non-paid internships available.
3. **Senior Projects** – The department will choose to support engineering, chemistry, math, molecular biology or physics students with the cost of senior projects that are geared toward the current goals of ongoing research of the research faculty of the department of radiology.

Interested students should come to the engineering seminar in Chan Shun Pavilion Room # 154 on May 18, 2005 at 7:00pm for a presentation of current and future research in the Radiology Department at Loma Linda University. The first set of interviews will be held May 18 and 19 at Walla Walla College Campus Career center. Interviews can be scheduled by calling Nelle Cornelison at phone #2664.
