

ENGR-433  
HW # 11 - due Monday

Hand written work is just fine when done neatly. Electronically created material is just fine as well. PDF files are my first choice for submissions but jpg or doc/docx are ok too.

- 1) Give serious thought to the sequencing of signals in your block diagram. Document them. Timing diagrams are good for this. Textual descriptions may assist.
- 2) Create state diagram(s) for state machines and fully document them.
- 3) You may write down things, do calculations, etc. as you do this homework and also the prior homework. Using a notebook while doing design is a good way to record details, document decisions and why you chose a certain way, etc. If not using a notebook, keep physical pages or electronic documents organized to allow notes to be referred to and also submitted as part of your lab

Submit documentation from the steps above to a D2L drop box as HW#11.
